# How to Download Recording File through IE Brower

This document is advised to download recording file through IE Browser just in case the USB device damaged or not be found.

1- Make sure your NVR recorder box connected into your local network (local switch or router), just like picture as below:

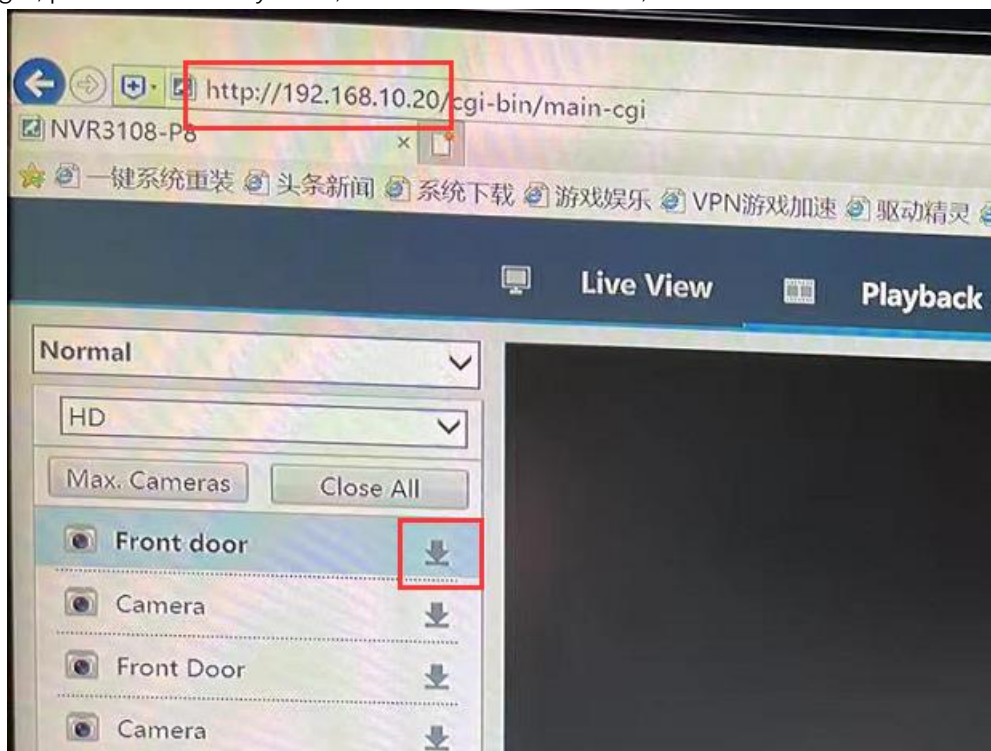

2- Enter your NVR box, "Main Menu"> "Network" and find it's IP address.

3- Login it's IP address through Internet Explorer browser (currently ONLY support by IE browser. Chrome and Firefox not supported).   PS. Three will be plug-in download required, just download and install it.
   After login, please select "Playback", and find related channel, there is a download icon like below picture.

4- After enter download icon, choose the start time and End time. In default, there is only one for the whole day and it would be slow for downloading. So we can check a preferred video clip on NVR box firstly. And select the related time interval here.
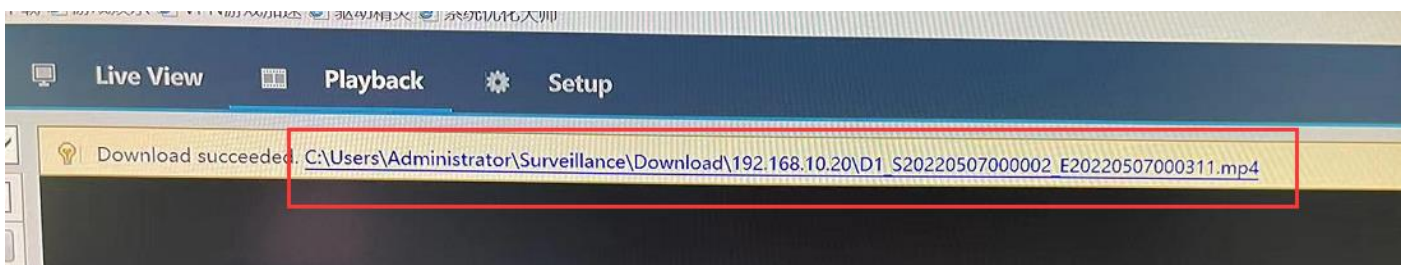

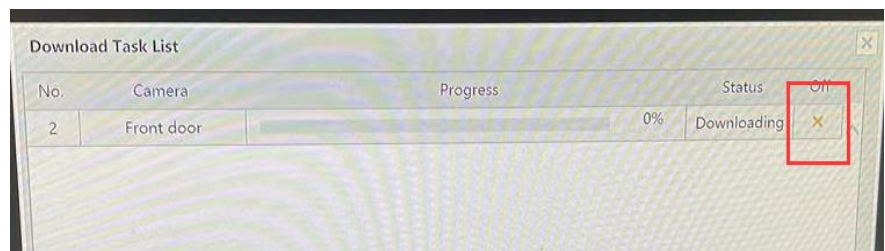

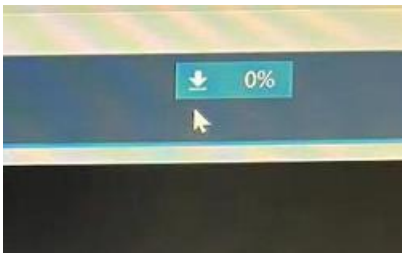

5- When you select the time, there will be file for downloading.

6- After downloading, there will be a blue icon regarding the download progress.
   If the file selected in short time, it will download until 100%, but if it's a long-time video, downloading progress very slow, you can click "X" icon. And the download path will come out.

7- Now we click this path, it will directly enter the folder, and our file was downloaded, and we can user a player to play.
